ABOUT ME

Analytical and detail-oriented graduate with a strong passion for data analysis and business problem-solving. Skilled in extracting insights from data, identifying trends, and supporting data-driven decision-making using tools like SQL, Excel, Python, and PowerBI. Possess a solid understanding of data visualization, reporting, and analytical thinking, along with a growing interest in product and user behavior analysis. Quick learner with hands-on experience in analytical projects and product case studies, seeking an opportunity as a Data Analyst while leveraging product thinking to deliver meaningful business insights.

SKILLS

My SQL	Product Management	Python	Power BI
MS Excel	Prompt Engineering		

PROJECTS

Multi Profile Wishlist

- Proposed a multi-profile wishlist system for personalized and shared shopping experiences.
- Conducted user research and competitor analysis to define feature scope and priorities.
- Designed storyboards and Agile-based roadmap to showcase product thinking and execution.

Temporary Address Lifecycle Management System

- Designed a temporary address management system for food delivery apps that helps frequent travelers avoid cluttered saved-address lists by enabling auto-expiring delivery locations.
- Improved checkout usability and reduced wrong-address selection risk through configurable temporary addresses, archival logic, and lifecycle-based address management.

Zepto Inventory & Sales Analysis

- Built and structured a real-world e-commerce inventory database using My SQL with messy retail datasets containing missing values, duplicate entries, inconsistent pricing formats, and stock irregularities.
- Performed end-to-end SQL-based business analysis including data cleaning, revenue analysis, inventory tracking, stock segmentation, and product performance insights by converting raw transactional data into actionable business intelligence.

IPL Insights Using POWER BI

- Analyzed 15+ IPL seasons (2008–2025) using interactive Power BI dashboards to identify team performance trends, player statistics, and season-wise ranking insights.
- Developed 17+ DAX measures and a structured star-schema data model integrating match, player, and team datasets for dynamic filtering, aggregation, and performance reporting.
